## HUBER Coanda Complete Plant ROTAMAT® Ro5 C

### Complete mechanical wastewater treatment for small sewage treatment plants

- Wastewater fine screening
- Grit separation
- Grit classification

A container-mounted ROTAMAT® Micro Strainer removes solid material from the wastewater depending on its bar spacing (e.g.  $e = 2$  mm). Screenings are removed and transported by a screw conveyor. Inside the closed rising pipe, screenings are dewatered and compacted by an integrated press. Subsequently, they are discharged into a container.

The cleaned wastewater flows by gravity into a Coanda circular grit trap. As the Coanda Tulip is fed through a vortex chamber, the wastewater flow gets tangential in addition to a radial flow direction. Air is sucked into the vortex and mixed with the wastewater flow.

The combination of three effects, namely the Coanda effect, the tea-cup effect and the air intake, guarantee that the organic components are kept on the surface and discharged over a weir while the grit settles in the lower trough area. The separated grit is removed through a classifying screw, statically dewatered and discharged into a container.

### Benefits

## BENEFITS OF THE HUBER COANDA COMPLETE PLANT ROTAMAT® RO5 C

- Complete mechanical pre-treatment by the combination of fine screen, circular grit trap and grit classifier in one compact, encased unit
- Integrated dewatering and compaction of the screenings; option of screenings washing
- Max. throughput 40 l/s
- Fully automatic control
- Completely made of stainless steel, pickled in an acid bath
- Small space requirement
- Option of frost-proof design down to - 25° C
